#### Investment policy:

- The Sub-Fund shall not hold real estate directly. Exposure to real estate can however be achieved indirectly through Target Funds and is limited to UCITS real estate ETFs. Such UCITS real estate ETFs aim to offer liquid access to physical real estate through exposure to closed-ended type real estate investment trusts (REITs) and real estate operating companies traded globally, which offer income associated with the real estate as well as the liquidity of the traditional stocks.
- The Sub-Fund may invest in money market instruments and short term deposits (up to 12 months) denominated in EUR, GBP, CHF, USD and JPY with a limit of 10% (ten percent) of the Sub-Fund Net Asset Value

per money market instrument or short term deposit. Such investment in money market instruments and short term deposits will be done only on an ancillary basis.

## What are the costs?

The person advising on or selling you this product may charge you other costs. If so, this person will provide you with information about these costs and how they affect your investment.

### Costs over time

The tables show the amounts that are taken from your investment to cover different types of costs. These amounts depend on how much you invest, how long you hold the product. The amounts shown here are illustrations based on an example investment amount and different possible investment periods.

They are based on the following regulatory assumptions: (i) in the first year, you would get back the amount that you invested (0% annual return) and, for the other holding periods, the product performs as shown in the moderate scenario and (ii) 10,000 is invested.

| Example Investment € 10,000 | if you exit after 1 year | if you exit after 3 years<br>(recommended holding period) |
|-----------------------------|--------------------------|---|
| <b>Total Costs</b>          | <b>€ 329</b>             | <b>€ 1,044</b>  |
| <b>Annual cost impact*</b>  | <b>3.3%</b>              | <b>3.4%</b>   |

(\*) This illustrates how costs reduce your return each year over the holding period. For example it shows that if you exit at the recommended holding period your average return per year is projected to be 3.5% before costs and 0.1% after costs.

### Composition of costs
